

Thank you for choosing Keyser Energy as your all season comfort provider!

Your Vermont tank inspection regulations have been updated, to take effect 8/20/17:

There are new pass/fail inspection checks for above-ground fuel storage tanks, regarding:

- Tank foundation
- Below-grade piping
- Alarm/whistle
- Tank vent/fill pipe
- Cracks/corrosion/leaks

For more detail on the updated regulations, view the VT State Dept. of Environmental Conservation document at: <http://dec.vermont.gov/waste-management/storage-tanks>, (see section 9-306, C1-5— which pertain to above-ground fuel storage tanks.)

Call us now:

Call now and let us preview and service your tank for any issues prior to your tank inspection. Per Vermont State regulations, each owner of an above-ground heating oil or kerosene storage tank is responsible for scheduling regular tank inspections. If, at inspection, a tank is not in compliance with the above 5 points, the State requires that it be “red-tagged” (shut off from fuel deliveries until it is repaired and brought up to compliance.)

CALL KEYSER ENERGY: [802-459-3349](tel:802-459-3349)

All season comfort:

Ask us about propane, air conditioning and whole-house generators—our systems and service keep you going year-round!
